

Say Goodbye To Broken Table Bases!

This year we are moving to a new stamped base, replacing our existing cast iron model.

Benefits of Stamped Steel Table Bases vs. Cast Iron

- **Increased Durability.** Stamped steel is more structurally durable than cast iron which is brittle and susceptible to fracturing.
- **Reduced Environmental Impact.** The foundry process used in the manufacturing of cast iron bases emits dangerous gases, dust, particles and other environmental waste products.
- **Smooth Surface.** Stamped steel has a smooth surface that reduces scratching of chair legs as they come in contact with the base, improves paint adhesion if other colors are desired, and allows for easy clean up.
- **Longer Warranty.** Plymold offers a 5 year structural warranty on all stamped bases compared to the 1 year warranty for cast bases.
- **Reduced Downtime.** Don't lose revenue by having tables out of service due to a broken base foot.

Plus, the stamped base features the same quick assembly process as our cast iron bases.
